

## 2. AJAX & Json

1. Make your own interface to display post title and body by requesting posts from this API: <https://jsonplaceholder.typicode.com/posts>
2. find out the rockbands.json file to make a page with 2 dropdown lists, the 1 st one is filled with the band and the 2nd one is filled with the artist after selecting a band from its dropdown list. Once the user selects an artist of the band; open his link.
